OBJECTIVE

Final-year Honours Computer Science student (Software Engineering & Artificial Intelligence concentration) at Wilfrid Laurier University, expected December 2026, with leadership experience supervising team operations under pressure and cross-functional project experience spanning software development, data-driven decision modeling, and UX strategy.

SKILLS

Programming Languages: Python, Java, C, C#, JavaScript, MATLAB, R, SQL, HTML/CSS, ARM

Tools & Platforms: Git, VS Code, Eclipse, Jupyter, MySQL, PostgreSQL, Linux, Figma

Business & Leadership: Team supervision, stakeholder communication, process improvement, Agile/Scrum, cross-functional collaboration

Concepts: Object-Oriented Programming, Data Structures & Algorithms, Reinforcement Learning, Database Design

EXPERIENCE

Backup Supervisor & Storefront Associate — Tim Hortons

Nov 2024 – Present

- Supervise team operations as Backup Supervisor, delegating tasks and ensuring staff adherence to company standards in a high-volume, fast-paced environment — directly applicable to managing priorities across rotational assignments.
- Handle cash transactions accurately while resolving customer concerns, maintaining food safety, and upholding cleanliness standards under time pressure.
- Deliver consistent, accurate service under pressure, helping the location maintain a positive guest experience during peak hours.

Peer Educator — Wilfrid Laurier University

Jan 2024 – May 2024

- Facilitated academic support sessions for international students, helping them adapt to Canadian post-secondary academic expectations.
- Mentored peers on campus resources, study strategies, and navigating college life effectively, building strong communication and coaching skills.
- Collaborated with faculty to develop and deliver educational materials, fostering an inclusive learning environment across a diverse cohort.

PROJECTS

Car Rental System

C#, PostgreSQL, Entity Framework

- Built a full-stack web application enabling customers to browse vehicles, make reservations, and manage bookings through a dynamic interface with a secure admin dashboard.
- Implemented back-end logic with C# and Entity Framework to handle vehicle availability tracking, pricing calculation, and role-based access control.

Smart Parking System

Python, Q-Learning, Dijkstra's Algorithm

- Modeled an urban resource-allocation problem as both a graph search task and a Markov Decision Process, implementing Dijkstra's algorithm with hill climbing and a Q-learning agent to compare deterministic optimization against adaptive decision-making.
- Designed and ran simulations across 3 constraint scenarios, evaluating cost, adaptability, and convergence; co-authored an 8-page IEEE-format research paper with a 4-person team and presented findings — experience translating technical analysis into a clear narrative for a non-technical audience.

Navigo: Travel & Logistics Platform UX Strategy

UX Design, Figma

- Designed the UX strategy for an all-in-one travel platform concept, defining target audience, information architecture, and a 12-page site map.
- Conducted competitor research on Uber and Lyft across pricing, UX, and market positioning, and produced a deliverables plan spanning wireframes, mockups, and an interactive prototype — demonstrating market analysis and strategic thinking valued in a rotational business program.

EDUCATION

Bachelor of Science in Computer Science — Wilfrid Laurier University

Expected Dec 2026

Concentration: Software Engineering & Artificial Intelligence

Relevant Coursework: Data Structures & Algorithms, Database Systems, Software Engineering, Artificial Intelligence, Operating Systems, Cryptography, Computer Networks, UI/UX Design, Information Retrieval
